

Date: 19 June 2026

Name: Neha Kadam

Task 1: String Functions

Write JavaScript programs demonstrating any 5 String functions.

The screenshot shows the Code Playground interface with the JS tab selected. The code is as follows:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>String Functions</title>
5 </head>
6 <body>
7
8 <script>
9   let str = "Hello SoloLearn"
10  document.write("1. Length: " +
11    str.length + "<br>");
12
13  document.write("2. Uppercase: " +
14    str.toUpperCase() + "<br>");
15
16  document.write("3. Lowercase: " +
17    str.toLowerCase() + "<br>");
18
19  document.write("4. Character at index
20  1: " + str.charAt(1) + "<br>");
21
22  document.write("5. Position of
23  'SoloLearn': " + str.indexOf("SoloLearn")
24  + "<br>");
25 </script>
26 </body>
27 </html>
```

The screenshot shows the Code Playground interface with the OUTPUT tab selected. The output is as follows:

```
1. Length: 15
2. Uppercase: HELLO SOLOLEARN
3. Lowercase: hello sololearn
4. Character at index 1: e
5. Position of 'SoloLearn': 6
```

Task 2: Array Functions

Write JavaScript programs demonstrating any 5 Array functions.

The screenshot shows a mobile application interface for a 'Code Playground'. The top bar is blue with a back arrow, the title 'Code Playground', a share icon, and a menu icon. Below the bar are four tabs: 'HTML', 'CSS', 'JS', and 'OUTPUT'. The 'JS' tab is selected. The code editor shows the following JavaScript code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Array Functions</title>
5 </head>
6 <body>
7
8 <h2>JavaScript Array Functions</h2>
9
10 <script>
11   let fruits = ["Apple", "Banana",
12     "Mango"];
13   document.write("<b>Original Array:</b>" +
14     fruits + "<br><br>");
15   fruits.push("Orange");
16   document.write("1. After push(): " +
17     fruits + "<br>");
18   fruits.pop();
19   document.write("2. After pop(): " +
20     fruits + "<br>");
21   fruits.shift();
22   document.write("3. After shift(): " +
23     fruits + "<br>");
24   fruits.unshift("Grapes");
25   document.write("4. After unshift(): " +
26     fruits + "<br>");
27   document.write("5. join(): " +
28     fruits.join(" - ") + "<br>");
29 </script>
30 </body>
31 </html>
```

At the bottom of the screen is a toolbar with icons for 'TAB', left and right arrows, a slash, an equals sign, a quote, and a 'RUN' button with a green play icon.

The screenshot shows the same 'Code Playground' app, but the 'OUTPUT' tab is selected. The output area displays the results of the JavaScript code execution:

JavaScript Array Functions

Original Array: Apple,Banana,Mango

1. After push(): Apple,Banana,Mango,Orange
2. After pop(): Apple,Banana,Mango
3. After shift(): Banana,Mango
4. After unshift(): Grapes,Banana,Mango
5. join(): Grapes - Banana - Mango

The bottom toolbar is visible but not detailed.

Task 3: Number Functions

Write JavaScript programs demonstrating any 5 Number functions.

The screenshot shows a mobile application interface for a code playground. The top status bar displays the time 8:53, signal strength, and battery level at 97%. The app's header is blue with a back arrow, the title "Code Playground", and share and menu icons. Below the header is a tab bar with "HTML", "CSS", "JS", and "OUTPUT" tabs. The "HTML" tab is selected. The code editor shows the following HTML and JavaScript code:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Number Functions</title>
5 </head>
6 <body>
7
8 <script>
9   let num = 123.456;
10
11   document.write("<b>Original Number:</b> " + num + "<br><br>");
12
13   document.write("1. toFixed(2): " +
14     num.toFixed(2) + "<br>");
15
16   document.write("2. toPrecision(5): " +
17     num.toPrecision(5) + "<br>");
18
19   document.write("3. Number('100'): " +
20     Number('100') + "<br>");
21
22   document.write("4. parseInt('123.45'): " +
23     parseInt('123.45') + "<br>");
24
25   document.write("5. parseFloat('123.45'): " +
26     parseFloat('123.45') + "<br>");
27 </script>
28 </body>
29 </html>
```

At the bottom of the screen is a toolbar with "TAB", navigation arrows, symbols for backslash, forward slash, equals, and double quote, and a "RUN" button with a green play icon.

The screenshot shows the same mobile application interface, but the "OUTPUT" tab is selected. The output displays the results of the JavaScript code executed in the previous screenshot:

```
Original Number: 123.456
1. toFixed(2): 123.46
2. toPrecision(5): 123.46
3. Number('100'): 100
4. parseInt('123.45'): 123
5. parseFloat('123.45'): 123.45
```

Task 4: Date Functions

Write JavaScript programs demonstrating any 5 Date functions.

The screenshot shows the 'Code Playground' app with the 'JS' tab selected. The code is as follows:

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Date Functions</title>
5 </head>
6 <body>
7
8 <script>
9   let today = new Date();
10
11   document.write("<b>Current Date &
Time:</b> " + today + "<br><br>");
12
13   document.write("1. Date: " +
today.getDate() + "<br>");
14
15   document.write("2. Month: " +
(today.getMonth() + 1) + "<br>");
16
17   document.write("3. Year: " +
today.getFullYear() + "<br>");
18
19   document.write("4. Day of Week: " +
today.getDay() + "<br>");
20
21   document.write("5. Current Hour: " +
today.getHours() + "<br>");
22 </script>
23
24 </body>
25 </html>
```

At the bottom, there is a toolbar with 'TAB', navigation arrows, and a 'RUN' button with a green play icon.

The screenshot shows the 'Code Playground' app with the 'OUTPUT' tab selected. The output is as follows:

Current Date & Time: Fri Jun 19 2026
20:56:05 GMT+0530 (India Standard Time)

1. Date: 19
2. Month: 6
3. Year: 2026
4. Day of Week: 5
5. Current Hour: 20

At the bottom, there is a toolbar with a 'RUN' button and a green play icon.

Task 5: Prime Number Using Function

Write a JavaScript program using a Function to check and display whether a number is Prime or Not Prime.

```
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>Prime Number Check</title>
5 </head>
6 <body>
7
8 <script>
9   function checkPrime(num) {
10     let prime = true;
11
12     if (num <= 1) {
13       prime = false;
14     } else {
15       for (let i = 2; i < num; i++)
16       {
17         if (num % i == 0) {
18           prime = false;
19           break;
20         }
21       }
22
23       if (prime) {
24         document.write(num + " is a
Prime Number");
25       } else {
26         document.write(num + " is Not
a Prime Number");
27       }
28     }
29
30     let number = 17;
31     checkPrime(number);
32 </script>
33
34 </body>
35 </html>
```

```
17 is a Prime Number
```
