Task 1: Electricity Bill Calculator

Create a function "calculateBill(\$units)".

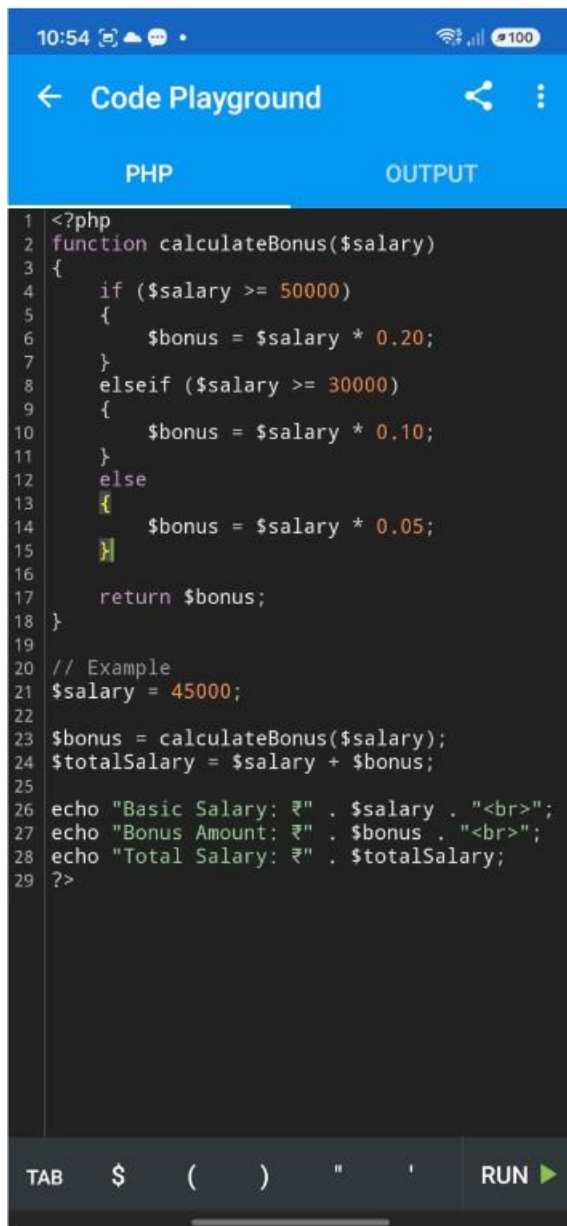

```
1 <?php
2 function calculateBill($units)
3 {
4     if ($units <= 100)
5     {
6         $bill = $units * 5;
7     }
8     elseif ($units <= 200)
9     {
10        $bill = (100 * 5) + (($units -
11        100) * 7);
12    }
13    else
14    {
15        $bill = (100 * 5) + (100 * 7) +
16        (($units - 200) * 10);
17    }
18    return $bill;
19 }
20 // Example
21 $units = 250;
22 $totalBill = calculateBill($units);
23
24 echo "Units Consumed: " . $units . "<br>";
25 echo "Total Bill: ₹" . $totalBill;
26 ?>
```

```
Units Consumed: 250
Total Bill: ₹1700
```

Task 2: Salary Bonus Calculator

Create a function "calculateBonus(\$salary)".

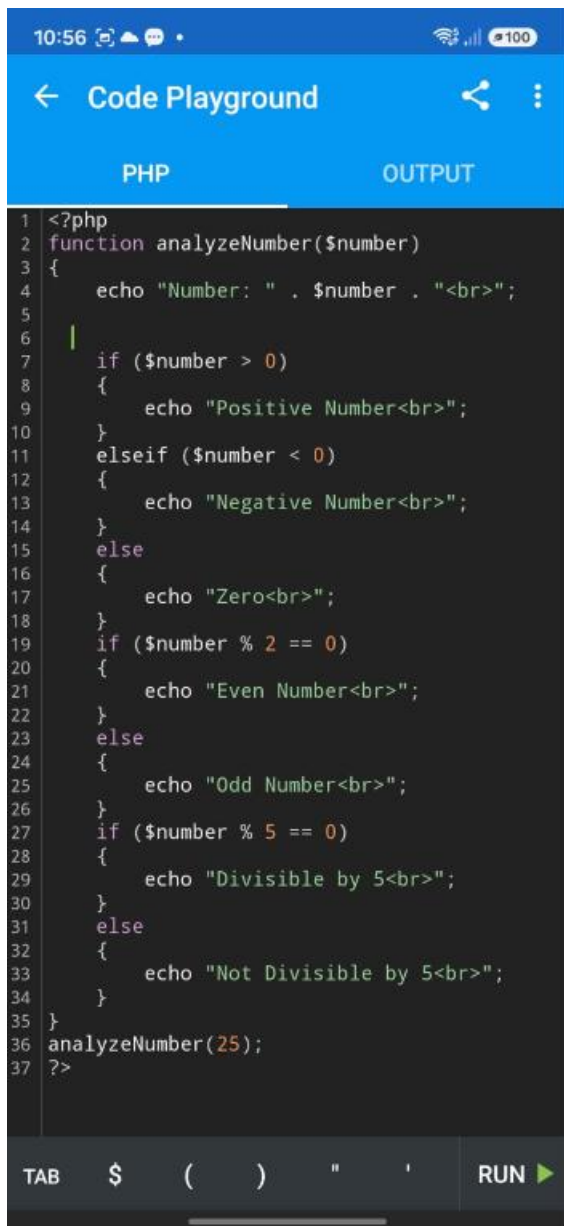

```
1 <?php
2 function calculateBonus($salary)
3 {
4     if ($salary >= 50000)
5     {
6         $bonus = $salary * 0.20;
7     }
8     elseif ($salary >= 30000)
9     {
10        $bonus = $salary * 0.10;
11    }
12    else
13    {
14        $bonus = $salary * 0.05;
15    }
16    return $bonus;
17 }
18
19
20 // Example
21 $salary = 45000;
22
23 $bonus = calculateBonus($salary);
24 $totalSalary = $salary + $bonus;
25
26 echo "Basic Salary: ₹" . $salary . "<br>";
27 echo "Bonus Amount: ₹" . $bonus . "<br>";
28 echo "Total Salary: ₹" . $totalSalary;
29 ?>
```

Basic Salary: ₹45000
Bonus Amount: ₹4500
Total Salary: ₹49500

Task 3: Number Analyzer

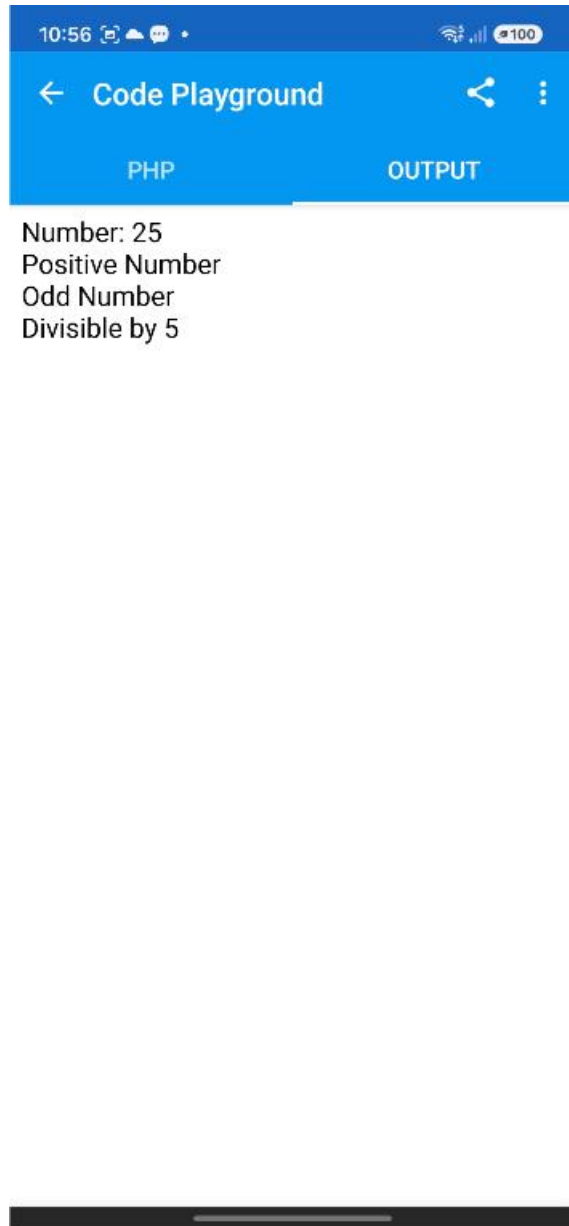

Create a function "analyzeNumber(\$number)" that checks whether the number is:

The screenshot shows a mobile application interface for a code playground. The top bar is blue with a back arrow, the text "Code Playground", a share icon, and a menu icon. Below the bar are two tabs: "PHP" and "OUTPUT". The PHP tab is active, displaying a code editor with the following PHP code:

```
1 <?php
2 function analyzeNumber($number)
3 {
4     echo "Number: " . $number . "<br>";
5
6     if ($number > 0)
7     {
8         echo "Positive Number<br>";
9     }
10    elseif ($number < 0)
11    {
12        echo "Negative Number<br>";
13    }
14    else
15    {
16        echo "Zero<br>";
17    }
18    if ($number % 2 == 0)
19    {
20        echo "Even Number<br>";
21    }
22    else
23    {
24        echo "Odd Number<br>";
25    }
26    if ($number % 5 == 0)
27    {
28        echo "Divisible by 5<br>";
29    }
30    else
31    {
32        echo "Not Divisible by 5<br>";
33    }
34 }
35
36 analyzeNumber(25);
37 ?>
```

At the bottom of the editor is a keyboard with "TAB", "\$", "(", ")", "'", and a "RUN" button with a green arrow.

The screenshot shows the same mobile application interface, but the "OUTPUT" tab is active. It displays the results of the PHP code execution:

```
Number: 25
Positive Number
Odd Number
Divisible by 5
```
